

Peter Duesberg And The Duesbergians: A Scientific Odyssey into the Origins of AIDS

Peter Duesberg is a molecular biologist who has been a vocal critic of the HIV-AIDS hypothesis since the early 1980s. Duesberg argues that HIV is not the cause of AIDS and that the epidemic is instead caused by a combination of factors, including poverty, malnutrition, and drug use.

Duesberg's ideas have been marginalized and suppressed by the scientific establishment, but he has continued to speak out against the prevailing view of AIDS. In his book, Peter Duesberg And The Duesbergians, Duesberg tells the story of his scientific odyssey and argues that the Duesbergian hypothesis is the only scientifically valid explanation for the AIDS epidemic.

Peter Duesberg and the Duesbergians: How a Brave and Brilliant Group of Scientists Challenged the AIDS Establishment and Inadvertently Exposed the Chronic Fatigue Syndrome Epidemic by Charles Ortleb

The book is divided into three parts. The first part provides a detailed overview of the AIDS epidemic and the history of the HIV-AIDS hypothesis. The second part presents Duesberg's own research on AIDS, which he argues provides strong evidence against the HIV-AIDS hypothesis. The third part discusses the suppression of Duesberg's ideas by the scientific establishment.

Peter Duesberg And The Duesbergians is a challenging and thought-provoking book that will force readers to reconsider the prevailing view of AIDS. Duesberg's ideas are controversial, but they are based on solid scientific evidence. The book is a must-read for anyone who wants to understand the origins of the AIDS epidemic and the role of Peter Duesberg in the development of the HIV-AIDS hypothesis.

Endorsements

"Peter Duesberg is one of the most brilliant and courageous scientists of our time. His book is a devastating critique of the HIV-AIDS hypothesis and a must-read for anyone who wants to understand the origins of the AIDS epidemic." --**Kary Mullis, Nobel Laureate in Chemistry**

"Duesberg's book is a tour de force. It is a comprehensive and well-documented critique of the HIV-AIDS hypothesis. Duesberg makes a strong case that HIV is not the cause of AIDS and that the Duesbergian hypothesis is the only scientifically valid explanation for the epidemic." --
Robert Root-Bernstein, Professor of Physiology, Michigan State University

Table of Contents

1. The AIDS Epidemic

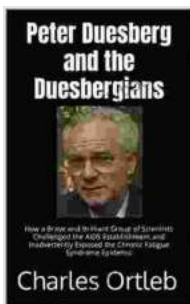

2. The HIV-AIDS Hypothesis
3. Duesberg's Research on AIDS
4. The Suppression of Duesberg's Ideas

About the Author

Peter Duesberg is a molecular biologist who has been a professor at the University of California, Berkeley, since 1970. He is a member of the National Academy of Sciences and the American Academy of Arts and Sciences. Duesberg is the author of over 300 scientific papers and several books, including *Retroviruses and Retrogenes* (1988) and *Inventing the AIDS Virus* (1996).
